- Bifidobacterium growth promoting activity of defatted rice brain hydrolyzed by Aspergillus oryzae (rice brain koji extract) was tested. It was effective as much as yeast extracts known as a Bifidobacterium growth promoting factor. It was found that defatted rice brain was more effective than wheat brain and hatomugi brain as koji material to produce the factor. We isolated the active substances from rice brain koji extract. The active fractions, having stimulants on the growth of Bifidobacterium were separated by ion-exchange chromatography, and those fractions were found to promote the growth of B. longum, B. bifidum, B. infantis, B. adolescentis and B. breve. Low molecular weight peptides in these fractions were suggested to play significant roles as Bifidobacterium growth promoting factor.
